

Visa Point-of-Sale (POS) Graphic

Application and Reproduction Guide

2016 Visa Europe. All Rights Reserved.

Point-of-Sale

This guide contains specifications to help Visa and its licensed member financial institutions, merchants and partners (“Licensed Users”) accurately reproduce the Visa POS Graphic across all media. Correct and consistent reproduction is essential to protecting the integrity of this valuable asset.

Licensed Users should follow these application and reproduction guidelines precisely wherever the Visa POS Graphic is used. These guidelines should be used in conjunction with the Visa Core Rules, Visa Product Brand Standards, and any other agreements entered into with Visa (the “Visa Rules”). Should these guidelines conflict with any Visa Rules, the terms within the Visa Rules shall prevail.

Elements

Visa Point-of-Sale (POS) Graphic

The Visa Point-of-Sale (POS) Graphic is for use where Visa payment products are accepted.

All physical merchant locations, online merchant locations and ATMs that accept Visa products for payment or cash disbursement must display the Visa POS Graphic.

The full-colour option is preferred, but one-colour (white/light and dark background) options are also provided for cases when full-colour reproduction is not possible.

In countries where use of Visa payWave is required. The Visa payWave POS Graphic would be used in addition to the Visa POS Graphic.

Only use Visa-provided artwork. Scale the artwork for the Visa POS Graphic larger or smaller as needed, but do not alter the proportions or elements in any way.

The standardised white background will not be visible on a white background.

The Visa POS Graphic should not be used in place of the Visa Brand Mark in any applications including on cards, in co-brand marketing materials or sponsorship lockups.

Visa POS Graphic artwork is available for download on www.visaeurope.com

Visa POS Graphic: Colour Specifications

For print applications:

- Visually match Visa Blue and Visa Gold to the appropriate Pantone® colours when printing in spot colour. Unless media demands 4-colour process, always print in spot colour
 - Visa Blue (coated): Pantone® 280
 - Visa Gold (coated): Pantone® 130
- Visually match Visa Blue and Visa Gold to appropriate CMYK formulas when printing in a 4-colour process
 - Visa Blue: CMYK C100 M85 Y0 K25
 - Visa Gold: CMYK C0 M33 Y100 K0

For online/onscreen applications:

- The Visa-provided artwork for online/onscreen use contains the correct RGB colour formulas for Visa Blue and Visa Gold:
 - Visa Blue: R26 G31 B113
 - Visa Gold: R247 G182 B0
- Note that converting to RGB from Pantone® spot colours or CMYK will not automatically produce the Visa-specific RGB colours
- Save the artwork as a GIF with all necessary colours. This will maintain the correct RGB values in non-anti-aliased areas
- When copying artwork from one application to another, convert the new document to RGB before pasting the artwork into the file.

Elements

Contactless Symbol and Contactless Indicator

The Contactless Indicator is comprised of four semicircles, graduated from the smallest to the largest in size.

The Contactless Indicator is used on payment devices to indicate contactless payment technology. It may also be used in marketing collateral and at point of sale to promote availability of contactless payments.

The Contactless Indicator must appear in a solid colour that provides the best colour contrast and legibility against the selected background colour. Optimal colours include black, white, grey or other neutral colours.

The Contactless Symbol is comprised of three elements:

- The Contactless Indicator at the center of the symbol
- A drawn hand holding a generic Contactless form factor
- An oval keyline that wraps around the Indicator and hand

The Contactless Symbol is required on all terminals that meet ISO 14443 and EMVCo Contactless specifications. It may also be used within associated marketing collateral educating consumers on how to make contactless payments at point of sale.

Contactless Indicator colour options

Contactless Symbol colour options

On a white/light background, the Contactless Symbol appears in black

On a dark background, the Contactless Symbol appears in white

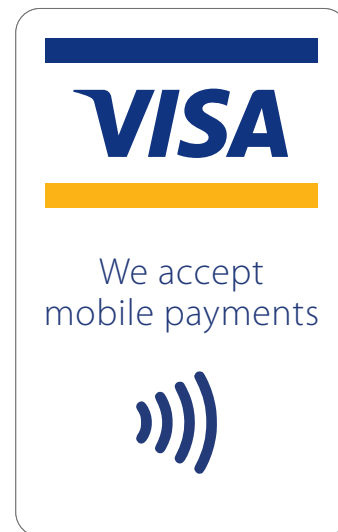

Elements

Visa POS Graphic: Use with Contactless Indicator

At physical merchant locations, graphics representing the acceptance technology (e.g., EMVCo's Contactless Indicator) should be used with the payment acceptance networks accepted.

This is best achieved through a combination of messaging (e.g., We accept mobile payments) and one or more icons representing the acceptance technology paired with payment network marks.

Applications

Overview

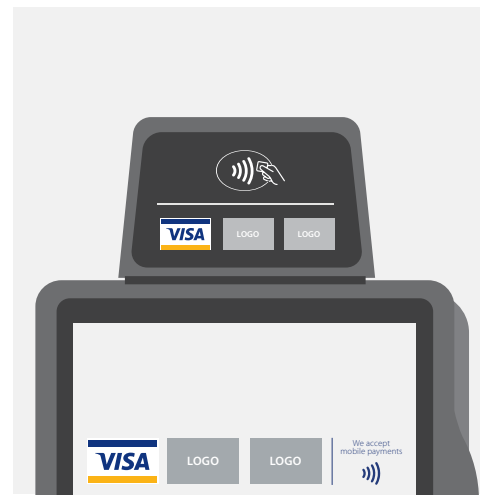

Use the Visa POS Graphic to indicate Visa as a payment method both online and offline in a wide variety of applications including

- Exterior/interior signage: at the entrance of physical merchant locations (store door or window) or inside (at the cash counter, etc)
- POS terminal signage: on the payment terminal screen as well as on the physical terminal
- Online acceptance: on an online or mobile merchant home or checkout page
